Make the switch to an International Design Mark

Thanks to the collaboration of international designer Erwin Van Handenhoven and luminary Rob Geddes, your home can be a showpiece of Australian International Design.

Hager Visage range has changed the face of home decor and wiring accessory design forever. Now when you change your decor, you can change your switch covers, without changing the technology behind it. Brilliant.

Home safe home

We understand that the world is an exciting place for young minds. That's why at Hager, we are particularly diligent about designing products that are not only beautiful to the eye but are also beautifully safe in young hands. Here are just some of the reasons why Hager switches and sockets are among the safest in the world:

CHILD SAFE SHUTTERS

Rather than merely masking potential danger, this innovative shutter mechanism protects little fingers from the inside of the power point.

CHEMICAL RESISTANT PIVOT MECHANISMS

Helps prevent power point switches degrading due to household chemicals.

ARC SHIELD

Hager's in-built arc shields reduce visible flash when switching lighting

ROTOLOC®

Eliminates the possibility of the switch rocker being pushed back into the wall cavity.

NO MORE POPS AND CRACKLES

Hager's superior load bearing technology ensures all our standard switches will effortlessly handle a true 16AX load capacity.

THINGS THAT GO BUMP IN THE NIGHT

If you have ever tried to fit a plug into a socket that you can't see, you will appreciate this handy innovation: A clever 'dimple' indented at the earth point make a frustrating task a breeze.

visage

Trends change, colours change, even your own personal tastes change. Now you can move with the times without ever needing to physically move. Even right down at wall-switch level, you can give your home a complete makeover. Meaning 'face' in French, VISAGE lives up to its name by allowing you to effortlessly clip on faceplates and colours to suit. Perhaps it's a softer bedroom décor whilst creating contrast in the kitchen – not only is it easy to change looks, it's expected! With a heavy influence on interior fashion trends coming out of Europe, this range gives you the freedom to create truly 'off the wall' combinations.

Switches & Sockets
available in Black, Charcoal Grey, Titanium Grey, White

metal mercury

Experience a seamless flow of metal, fitting perfectly both on your wall and in your lifestyle. If you desire the look of stainless steel appliances, brushed aluminium surfaces, and shiny fittings, this ultra-stylish range may just set off your metal detector. Now you can create your very own metallic statement without compromise. For a lustre finish that's really worth lusting after, seek out the blemish-free quality of METAL MERCURY for your project. When plain white switches just won't do, the clean and sleek look of real metal adds a true dimension to your walls. With METAL MERCURY covers, you get the feel of real aluminium or stainless steel, with a manufacturing technique that ensures absolute precision fitting over any base product.

Cover plates
available in Stainless Steel or Aluminium with corresponding Black, Charcoal, Titanium Grey or White coloured ends

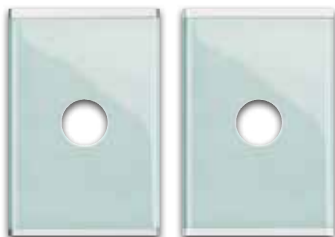

glaze

Get a stylish and affordable look that's unmistakably modern and mistaken for glass. Glass fittings can transform a space from sleepy to sleek through their glossy finish and clean lines. Now, thanks to new technology, there's an affordable way to create a high quality glass finish that looks the part, while not actually being made from glass at all. The secret of GLAZE is in its colour-matched surface glaze technology; the coating process gives off a reflective quality reminiscent of glass. It is made from a durable polycarbonate – easy to clean and ultra tough. From switches and sockets to TV and data points – nothing escapes our 'glaze' – all seamlessly blending with your existing real glass interiors.

Cover plates
available in Mint Glaze with corresponding Titanium Grey or White coloured ends

premiere

When the space demands accessories that don't dominate, choose a timeless mix of classic and brand new. More and more people are choosing the timeless look in all things new, combining classic aesthetics with modern day benefits. Now you can enjoy a simple and stylish look that creates a soothing effect on its surroundings. Quietly boasting functionality and a beautifully understated form, you'll fall in love with today's take on yesteryear. With its symmetrical feel and circular switches, PREMIERE has been made to measure – with different coloured surrounds which simply clip on to create your palette of choice. The natural feel and curves combine effortlessly with a modern set of colours for clean lines and lasting elegance.

Switches & Sockets
available in Black, Charcoal Grey, Titanium Grey and White

Real tempered glass - Anthracite Coal, Mountain Mist, Arctic Ice

Real slate - Slate

cyberart

To keep up with today's trends, you need to move ahead of them and embrace the technology of tomorrow. Create a modern look in your home or office – matching splashbacks to power points; flat screen TVs to flat panel switches. The classic and linear appeal has never been more achievable in so many places at once. It's cool to touch and cool to own. Now you can make luxury an art form with the premium finish of real surrounds. Designed and sourced in Europe, CYBERART draws from the leading trendsetters in style excellence – to give a truly unique finish that is limited only by your creativity.

cyberart surrounds for premiere or cyber ranges, available in the following colours and finishes:
Glass effect polycarbonate - Midnight, Wild Mushroom, Nimbus, Aquamarine, Frost

Polycarbonate - White

systo

Combining functionality with style, Hager's SYSTO modules make wall mounted devices look good. They incorporate LED wall lights for hallways or as a nightlight for your child's bedroom and motion detection at any height to avoid trips and spills when searching for the switch in the dark. Providing a high level of aesthetics in both PREMIERE and VISAGE style plates, SYSTO module functions have been created to make your life easier.

premiere and visage style plates accommodate systo modules
available in LED light and motion detector

“Our tebis KNX automation system allows me to draw the curtains, switch off the lights and turn on the movie – all with the touch of a button...
How smart is that?”

home automation

Forget having to wait for a room to heat up or cool down before you can relax in comfort. Gone are the days of the air conditioning being left on when everyone has left for the day, or the kids leaving every light on in the house! A tebis KNX automation system can take the hassle out of everyday things – from appliances that are turned on when you want to use them - then off when you don't. Imagine taking back control of your home! tebis building automation is designed around the KNX open standard which offers the greatest flexibility and scalability when installing a bus based control system. A tebis KNX automation system empowers you to manage your home, from comfort to efficient energy use, from entertainment to total security and peace of mind. You choose.

tebis KNX automation switches available in 1, 2, 4 and 6 gang push buttons in all of the ranges and finishes seen on the previous pages.

Video Display Interfaces

AT LAST - FINESSE INSTEAD OF MESS

Have you ever looked at the mess of cables, switches and plugs behind your home theatre equipment, and thought, “there has to be a better way”. Well now there is, and it’s not only better organised – it’s smarter, better designed, better looking and safer.

‘ANY COLOUR AS LONG AS IT’S WHITE’ – NO MORE

One of the most exciting benefits of Hager’s range, is the choice of different cover plates, colours and finishes. The design of your home is no longer limited to the colour of your walls. Enjoy the freedom of being able to truly complete the picture with Hager.

GROUPED SWITCHES

De-clutter with a grouped outlet. The combinations are endless – choose the mix of power and connections that best suits you.

COMPLETE NETWORK CONNECTION

If you have a large, high-end data installation, ask about our specialist Krone, shuttered and unshuttered data solution.

MAKE THE CONNECTION WITH HAGER

Whether connecting your home theatre components, your speakers, your amplifier, your Foxtel box, your digital ready TV or simply a phone line we have the mechanisms to do the job in either horizontal or vertical configurations. And with our patented, RotoLoc® switch mechanism, you’ll never experience ‘pushing your cable plug into the wall cavity’ again.

CLEAR, EASY SWITCH LABELLING

Why guess? Our labelling system, makes it easy to understand what switch operates what device. You even have the choice of text or icons or both. Simple.

Available in all colours

Complete the picture

Explore our wide range of products to complete the set and exceed your project requirements.

DIMMER SWITCHES

Save money and create soft ambience with a light dimmer. Learning from other designs, the control knob has been secured from the back so it can't be removed accidentally from the front of the plate.

WIDE SOCKETS

At last, power points that can both be useful when one is loaded with a bulky power pack or battery charger. The solution is embarrassingly simple: greater spacing between the two sockets.

MULTIGANG OPTIONS

In areas (such as near a TV) where there may be more than one type of point in close proximity, it makes sense to combine them together onto one multigang plate. Not only aesthetically more stylish, but also a more secure option.

WATERPROOFING & PROTECTION

Specially designed IP66 rated switches are perfect for bathrooms and laundries, where contact with the switch from wet hands won't cause the water to reach the electricity. The polycarbonate switches are UV protected, making them suitable for outside, and the same wet-protection helps out in dusty environments such as workshops and garages.

HOTEL/MOTEL OPTIONS

Key-card switches utilise micro switch technology to ensure the switch functions every time. Perfect for hotels, motels and hostels, as are our overload-protected shaver outlets.

IDENTIFICATION LABELS

RotoLoc® ID windows provide clear circuit identification, while out front you'll find custom made software and stickers to identify risks or explain procedures. Logo mechanisms are available with both text and picture clearly visible – suitable for children, visually impaired, elderly and overseas visitors.

Available in all colours

Not just a pretty faceplate

Hager products are underpinned by a world-class commitment to safety, innovation, and quality. When you purchase any of our products, you are buying the peace of mind gained through hours of research and road testing.

One of the key components of our win in the 2006 Australian Design Awards was the Hager *RotoLoc*® system. A revelation to behind-the-scenes safety and end-user experience, RotoLoc® has transformed a once stagnant segment of the marketplace.

Like many great ideas, this one is simple. The switch mechanism is locked into place behind the plate in a method similar to a classic bayonet light bulb. The result is a switch that cannot push back – staying on your finger and not through the wall.

Take advantage of Hager Project Solutions

Hager provide a complete electrical solution from your single dwelling right through to your commercial and multi-residential projects.

We offer competitive project pricing and a high level of service for all your wiring accessory needs. Our tailored solution will meet your requirements for your entire project.

Our team provides you with:

- Quick quotation turnaround
- Packaged product solutions delivered on site from the meter to the wiring device.
- Custom made solutions
- End to end project management
